

DAI VIET HUNG TRAN

AI / Computer Vision Researcher & Software Engineer

Seoul, South Korea | LinkedIn: Dai Viet Hung Tran | Portfolio available via LinkedIn

PROFESSIONAL SUMMARY

Computer Science researcher and software engineer with hands-on experience in computer vision, deep learning, AI systems, and software development. Currently a Research Assistant at Sejong University working on conditional image generation and object detection, with prior research experience in the XR Research Laboratory. Experienced in Python, TensorFlow, OpenCV, YOLO, KNIME, machine learning, AI benchmarking, quality assurance, and technical project coordination. Co-founder of Papercron AI, with experience translating AI concepts into practical software solutions.

TECHNICAL SKILLS

Languages: Python, Java

AI / ML: Machine Learning, Deep Learning, Computer Vision, TensorFlow, YOLOv8, OpenCV, Roboflow

Data / Research: KNIME, AI benchmarking, model experimentation, prompt and response evaluation

Engineering: Software development, computer vision systems, object detection, conditional image generation

Leadership: Technical project management, multilingual project coordination, quality assurance

PROFESSIONAL EXPERIENCE

Research Assistant Sejong University <i>Seoul, South Korea</i> - Conduct research and development in conditional image generation and object detection. - Develop and evaluate AI-driven computer vision solutions in an academic research environment.	Aug 2026 - Present
Co-Founder Papercron AI <i>Ho Chi Minh City, Vietnam</i> - Co-founded an AI-focused startup delivering software and artificial intelligence solutions. - Contribute to technical direction, solution development, and delivery of applied AI projects.	Mar 2026 - Present
Project Manager EBIT <i>Seoul, South Korea</i> - Managed multilingual AI and benchmark projects, coordinating delivery and maintaining project quality standards. - Oversaw quality assurance processes before client delivery and supported cross-functional execution.	May 2026 - Aug 2026
AI Engineer EBIT <i>Seoul, South Korea</i> - Designed and developed advanced AI systems for specialized application requirements. - Worked on applied artificial intelligence workflows with an emphasis on reliable technical delivery.	Dec 2025 - Aug 2026
Student Researcher, XR Research Laboratory Sejong University <i>Seoul, South Korea</i> - Conducted research on deep learning and machine learning techniques using KNIME and Python. - Supported experimental AI research and model-oriented development in the university XR laboratory.	Mar 2025 - May 2026
Software Development Intern Sejong University <i>Seoul, South Korea</i> - Developed software involving computer vision and artificial intelligence. - Built practical programming experience across research-oriented software development tasks.	Sep 2023 - Mar 2025
AI Programmer Outlier <i>Remote</i> - Evaluated and improved AI prompts and responses for Python programming tasks. - Applied programming and AI knowledge to improve response quality and technical correctness.	Dec 2024 - Mar 2025

EDUCATION

Sejong University Computer Science Academic focus: Artificial Intelligence, Computer Vision, Machine Learning, and software engineering.	Seoul, South Korea
--	---------------------------

SELECTED FOCUS AREAS

Computer Vision | Object Detection | Conditional Image Generation | Deep Learning | Machine Learning | AI Systems
